

Project Example 1

Total Solution for Mercedes-Benz Citan Tourer – Sunroof Shading System

The Tourer version of the Mercedes-Benz Citan MPVs came with two tiltable sunroofs and one large fixed-type sunroof. It has not been designed with or with any provision to fix curtains or shades. Therefore, it was very difficult to sell in tropical countries.

I was given a contract to provide a total solution by designing, developing, manufacturing, and installing a suitable shading system. The following pictures show the final product. After getting the approval for the prototype, I received continuous orders to install the same system on all the Citan Tourer vehicles imported to Sri Lanka.
